

Horus Management System

This document explains **how the system works end-to-end** using **simple diagrams and clear workflows**, written for non-technical and management audiences.

2) Main Modules Relationship (Big Picture)

3) Inventory Workflow (With QC)

Why this matters: - No raw material or product is used **without approval**. - Prevents waste, recalls, and production errors.

4) Production Order Workflow (Core Process)

Manager control points: - Raw materials **must be QC-approved**. - Finished products **cannot enter inventory** without QC.

5) Quality Control (QC) Lifecycle

Manager benefits: - Full traceability. - Clear rejection reasons. - QC history is never lost.

6) Maintenance Workflow (Machines & Lines)

What management sees: - Downtime reasons. - Affected machines/lines. - Resolution tracking.

7) Employees & Authorization Flow

Result: - Right person, right access. - Reduced human error.

8) Decision Points Summary (For Managers)

Area	Automatic Control
Inventory	QC enforced
Production	QC + stock checks
QC	Approval blocking
Maintenance	Status workflow
Employees	Role-based access

9) One-Sentence Executive Summary

Horus ensures that no material is used, no product is released, and no machine is ignored without full quality, production, and management control.
